Utkarsh Arora(2020143)

Problem Statement:

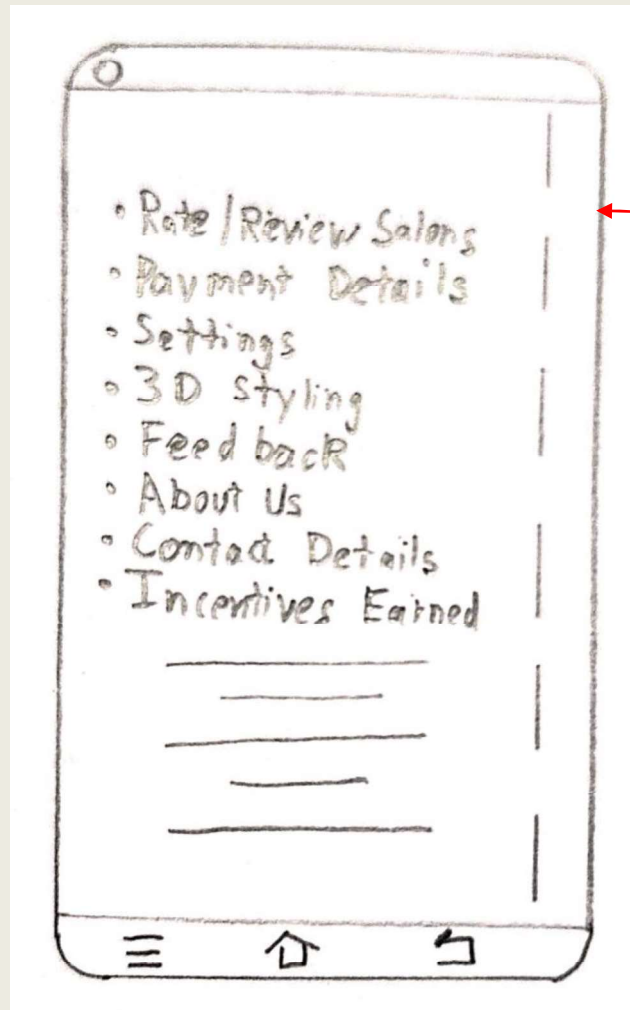

Whenever one has to visit a barber/salon, they generally have to wait for a very long time in the queues, which is very tedious and frustrating. Moreover, these queues are not at all organized. When finally, after waiting for a long time our turn will come, someone from nowhere pops up & says "I was in the queue before you & just went out for some reason". Again you have to wait. Literally, the queue waiting times in salons can range from anywhere between 15 mins to multiple hours, depending upon the day.

Solution Statement:

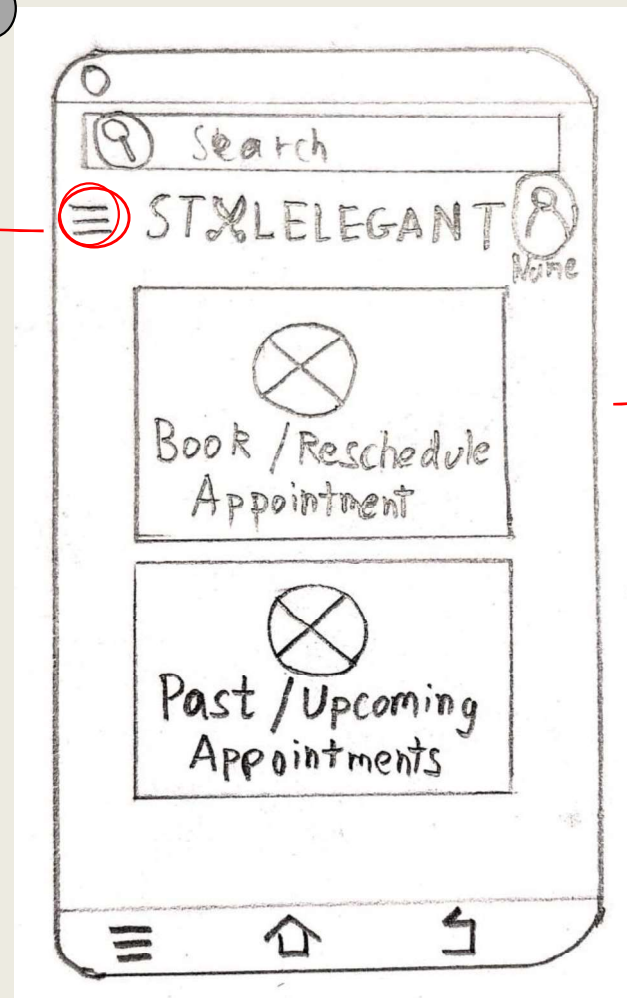

We present our idea: StyleElegant - an app, that would help you style up elegantly, by acting as a medium between salons/spas and the end-customers, i.e. you. It would help you to book available slots in salons/spas and would also give suggestions to you.

Also as an additional feature, we have added a feature where the app designs your 3D Modelled Face using your camera. Using this, one can try multiple styles before getting them, so that they do not have to regret later.
